

Js → Call() → Apply() → Bind()

Call() → Used to invoke a function with specified this value & arguments provided individually.

```
let q1 = doc.querySelector("p");

function greet (message) {
  console.log (this);
  return `${message}, ${this.name}`;
}

const person = {
  name: 'John'
}

q1.innerHTML = greet.call (person, "Hi");
```

Op  
Hi, John  
console.log  
{name: 'John'}

Signature → function call (this Arg, arg1, arg2, ...)

Specify the value of this within function when it is invoked

```
<script>
let one = doc.getElementById ("one");
let two = doc.getElementById ("two");

const person = {
  fullName: function (location, rollno) {
    return `${this.firstName} ${this.lastName} from ${location}, Rollno: ${rollno}`;
  }
};

const person1 = {firstName: "Arjun", lastName: "Navneet"};
const person2 = {firstName: "Tejun", lastName: "Abhi"};

one.innerHTML = person.fullName.call (person1, "Mumbai", 22);
two.innerHTML = person.fullName.call (person2, "Mumbai", 22);
</script>
```

Op  
Arjun Navneet from Mumbai, RollNo: 22  
Tejun Abhi from Mumbai, RollNo: 22
