

CTE

- Another way of writing a subquery (and personal preference) is a Common Table Expression (CTE)

```
WITH cte_name AS  
(SELECT column1, column2 etc  
FROM table_name)  
  
SELECT *  
FROM cte_name
```

CTE

- CTE here is named ORDERS

```
WITH ORDERS AS
```

```
    (SELECT ORDERDATE, COUNT(ORDERNUMBER) AS ORDERS  
     FROM CLASSICMODELS.ORDERS  
     GROUP BY ORDERDATE)
```

```
SELECT *
```

```
FROM cte_name
```
