

LEFT JOIN

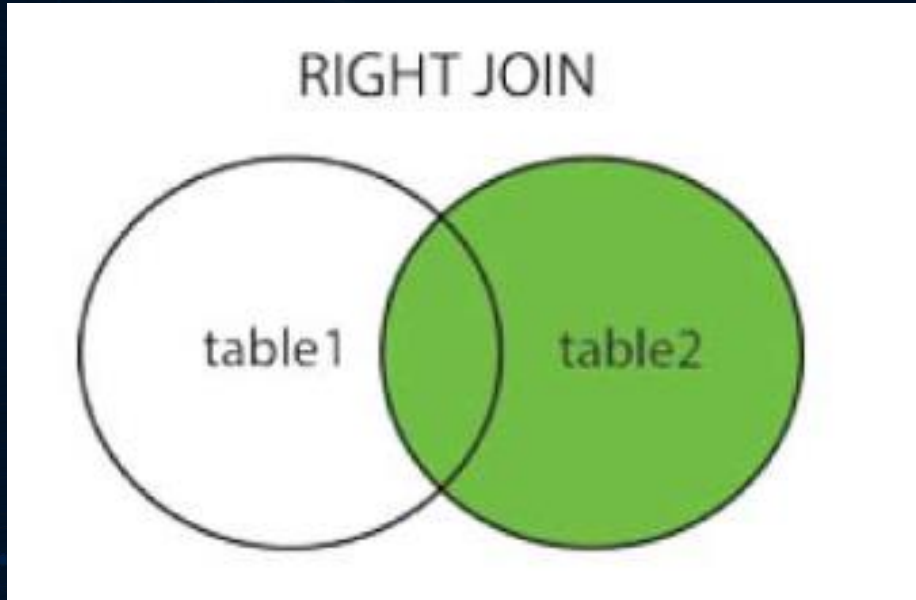

- Returns all results from the first table, and any matching record from the second table.
- If there are no matching records, it will return NULL for the columns from the second table.

EXAMPLE

```
SELECT  
  
FIRSTNAME,  
  
LASTNAME,  
  
CUSTOMERNAME  
  
FROM CLASSICMODELS.EMPLOYEEST1  
  
LEFT JOIN CLASSICMODELS.CUSTOMERST2  
  
ON T1.EMPLOYEENUMBER =  
T2.SALESREPEMPOLEENUMBER
```

RIGHT JOIN

- Works similarly to Left Join, but will return all rows from the second table listed, and any matching row from the first table.

EXAMPLE

```
SELECT  
  
FIRSTNAME,  
  
LASTNAME,  
  
CUSTOMERNAME  
  
FROM CLASSICMODELS.CUSTOMERST1  
  
RIGHT JOIN CLASSICMODELS.EMPLOYEEST2  
  
ON T1.SALESREPEMPOYEEENUMBER =  
T2.EMPLOYEEENUMBER
```
