

# This Topic

DISTINCT  
LIKE  
ORDER BY

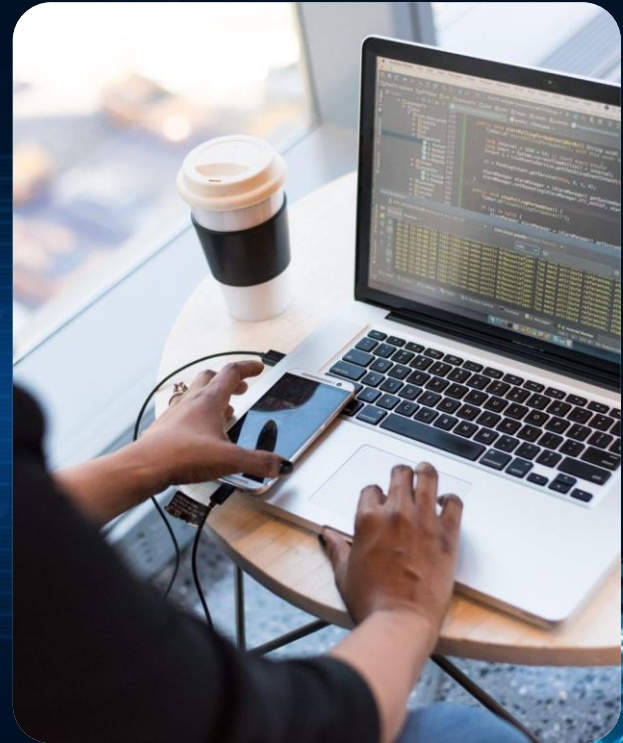

```
SELECT DISTINCT COUNTRY  
FROM classicmodels.customers  
WHERE city  
LIKE '%New%'
```

# DISTINCT

- Used before the column name to provide a unique list
- Eg. Unique list of countries in the customer table

```
SELECT DISTINCT COUNTRY  
FROM classicmodels.customers
```

# LIKE

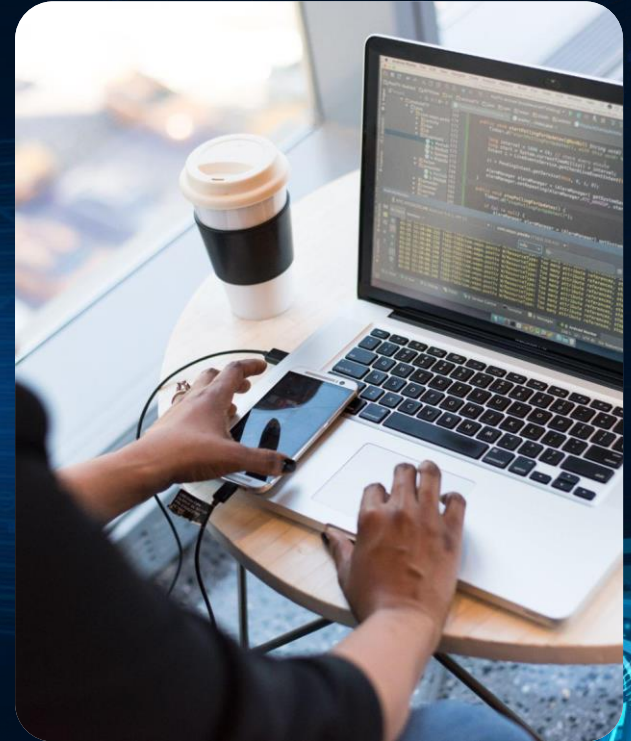

- Used as a wildcard character

```
where city LIKE '%New%'
```

- Can be used anywhere, % represents anything

```
where EmailAddress LIKE '%classicmodel%'
```

# ORDER BY

```
SELECT *  
FROM classicmodels.employees  
ORDER BY LastName
```

- Order the results of our query by any column name using the ORDER BY function
- If you want the results in descending order, you need to add desc after the column name. Otherwise SQL will return them in ascending order.
