⟶ **JS Polymorphism**

Non ⟶ diff ⟶ Js objects.
method ↑

JULY 2020 ⟶ Provider an ability to call same

⟶ eg" Child, Parent ⟶ class ⌒ same ⌒ Method ; object ⟶ child class

Class methods ↰ both ⟵ invoke

```
class A { 
    display() { console.log ("A() invoked"); }
}
class B extends A { 
    display() { console.log (" B() invoked"); }
}
var bcall = [ new A() , new B() ];
bcall . forEach (function (msg) {
         msg . display() ;
});
```

%P

A() invoked
B() invoked

⟶ Eg: Child class object Invoking Parent class Method

```
class A() { 
        display() { console.log ("A() invoked") ;
        }
}
class B extends A() { }
Nav callme = new B();
callme . display() ;
```

%P

A() invoked
